Introduction

Welcome to the 2016.1 release of the *Discovery™*, Landmark[®] Connectivity, and Seismic Modeling software.

- Discovery includes the Discovery[™] 2016.1 version of PRIZM[™], the 2016.1 version of smartSECTION[®], and the 2016.1 version of SeisVision[™]
- Landmark Connectivity includes the WellXchange[™], GridXchange and SeisXchange[™] software.
- Seismic Modeling includes the 2016.1 version of the LogM[™] and STRUCT[™] software.

Discovery software is available through the LMKR Support Portal - Downloads page or, by request, on a DVD.

Caution:	
General	The following conditions must be met before you can install the Discovery,
Installation	Landmark Connectivity, and Seismic Modeling software:
Requirements	 You must have Administrative Rights to the local computer that will run the installation.
 please refer to the 	 Must have <i>Internet Explorer 6.0</i> or higher installed.
System Requirements	 Microsoft .NET4.5.1 must be installed.
for a complete list	 If you are using smartSECTION on a <i>Windows® 10 64-bit</i> operating system, then .NET Framework 3.5 must be installed. Must have networking installed including the <i>TCP/IP</i> protocol. This software should only be installed on <i>Windows® 7 Enterprise 64-bit</i>, <i>Windows® 7 Ultimate 64-bit</i>, <i>Windows® 10 64-bit</i>, <i>Windows® Server 2008 R2 Standard 64-bit</i>, or <i>Windows® Server 2008 R2 Enterprise 64-bit</i> operating systems. If using Discovery on OpenWorks, OpenWorks for Windows 5000.10.1.05 must be installed. OpenWorks for Windows has two install options; you can use either the Full install option (recommended) or the Basic install option. If working in a network environment, do not forget that for all computers
	to continue to work together in shared projects, ALL computers (clients and servers alike) must be updated to the same version of Discovery if any of them are updated. It is intentional that computers with different versions of the Discovery software cannot (under normal circumstances) and should not (in any case) be connected with each other.

The Welcome Guide document included with the download from LMKR or on your DVD contains information on the exciting new enhancements and features in the Discovery 2016.1 release.

This document includes very important information that you should read before installation:

- Before You Begin Installation
- <u>System Requirements</u>
- Installation Overview and Step-by-Step Instructions
- Utilities
- Uninstalling Discovery Software

If you have any questions or issues with installation, do not hesitate to contact <u>Technical Support</u>.

Before You Begin Installation

Before you start the installation process, GeoGraphix recommends that you follow these guidelines.

- 1. If you are working in a network environment, install the LMKR license server on one computer to be used by all client computers.
- 2. Obtain your new license file. In almost all cases, a new release requires a new/updated license file.

<u>Note:</u> There are mandatory upgrades to the License Management Tool (LMT) so that users can configure licensing for this release. This LMT upgrade can occur before or after installation of the GeoGraphix 2016.1 software. See the <u>LMKR Licensing</u> section for more information.

- 3. Make sure you have the current install obtained from LMKR or on the DVD and the most recent software update files (if applicable) at the time of installation.
- 4. Make complete backups or archives of all your projects. This is a very important step, **DO NOT SKIP THIS STEP**. Remember, a backup (such as from a tape) is only as good as the last time it was tested.
- 5. Backup any customized files from the **Data** directory (such as custom libraries, symbols, and coordinate system files). Do this only if there is ANY chance of going back to the previous version.
- 6. Test any project updates or functionality if desired in a non-production environment.
- 7. Uninstall any previous version of GeoGraphix Discovery before installing version 2016.1.
- 8. Make sure that the <u>prerequisites</u> have been installed.

Note: If working in a network environment, do not forget that for all computers to continue to work together in shared projects, ALL computers (clients and servers alike) must be updated to the same version of Discovery if any of them are updated. It is intentional that computers with different versions of the GeoGraphix software cannot (under normal circumstances) and should not (in any case) be connected with each other.

System Requirements

System requirements for all Discovery applications are provided as general guidelines. Hardware requirements will vary considerably, depending on the types of projects, project sizes, the number of users, and network infrastructure/traffic. Contact your technical sales representative or <u>technical</u> <u>support</u> to discuss your requirements.

- Workstation: Discovery
 - Geologic Suite (DataManager, GESXplorer, and PRIZM)
 - Geophysical Suite (SeisVision, pStaX, and SCAN)

<u>Caution</u>: Landmark Connectivity or using Discovery version 2016.1 with Discovery on OpenWorks projects requires the 5000.10.1.05 version of OpenWorks for Windows.

- Project Server: Discovery
 - Geologic Suite (DataManager, GESXplorer, and PRIZM)
 - Geophysical Suite (SeisVision, pStaX, and SCAN)

Workstation: Discovery

The requirements for Discovery Workstation are as follows:

Software and Hardware Requirements

We recommend using the latest Microsoft[®] service packs and security patches. The following table lists the operating systems which are supported.

Supported Operating system	RAM	CPU
Windows [®] 7 Professional x64	8 GB Minimum	Pentium i5/i7 or any Quad
Or	16+ GB Recommended	Core Processor
Windows [®] 7 Enterprise x64		
Or		
Windows [®] 7 Ultimate x64		
Or		
Windows [®] 10 x64		

Graphics Hardware Requirements

We recommend the following Graphics Hardware to run the GeoGraphix applications:

Application Support Level	Required Operating System	Required Graphics Hardware
All Discovery Applications including Discovery 3D and advanced 3D visualization (Pro 3D)	All Supported	2 GB Minimum 4 GB Recommended DirectX 11 capable hardware. (see Note 2)
Discovery Applications <i>except</i> for Discovery 3D and advanced 3D visualization (Pro 3D)	All Supported	All Supported

<u>Note 1:</u> Microsoft DirectX End-User Runtime (June 2010) is required to run Discovery 3D and advanced 3D visualization (Pro 3D).

Note 2: To run Discovery 3D and advanced 3D visualization (Pro 3D), it is recommended that an NVIDIA DirectX 11 compatible card be used. We recommend using the latest video drivers and MS updates for your system.

Additional Requirements and Recommendations

- DVD ROM required for media installation. You do not need this if you have downloaded the installation from <u>http://support.lmkr.com/</u>.
- DCOM/Firewalls configured to allow remote access. Only necessary if sharing projects.
- Microsoft .NET Framework 4.5.1 runtime is required.

Optional Software Requirements

Tools	Software Requirements
For spreadsheet Import Utility in WellBase, SeisBase, and LeaseMap	Excel 2007, 2010 or 2013 (32 or 64 bit)
For Selected Help Files	Adobe Reader
For Discovery on OpenWorks, GridXchange, and SeisXchange For ESRI geo-referenced	OpenWorks for Windows 5000.10.1.05 – Basic or Full (recommended) Installation available on Landmark's LSM. (See Notes below) and SeisWorks 5000.10 (for seismic workflows). ESRI ArcGIS Runtime Engine 10.2.x or 10.3.x (included in the 3rd
images and ESRI CAD file import in GeoAtlas	Party Installer).
For LOGarc™ Version 3.2.1.00 or 4.1.0.3 access in smartSECTION	To use the LOGarc [™] feature, the LOGarc [™] Version 3.2.1.00 or 4.1.0.3 software must be downloaded from IHS LogTech Canada, LTD and a valid account must be in place. You must have administrator rights to the computer on which you will load the software.

Note for Discovery on OpenWorks: The OpenWorks Full installation requires Hummingbird Exceed. The Oracle client installation in use with the OpenWorks Full installation requires that the "Administrator" option be selected. The "Administrator" option type includes the SQL Plus and the Oracle Database Utilities components, which are needed to run Discovery on OpenWorks, as part of the total OpenWorks package.

Note: Hummingbird Exceed is not required for the OpenWorks Basic installation. If the OpenWorks Basic installation is used, the Oracle client installation can use the "Administrator" option, which will include all of the needed components. Or, the Oracle client installation for the OpenWorks Basic installation can use the "Custom" installation type. However, with the Custom installation type, the following components must be installed:

- Oracle Database Utilities 10.2.0.1.0, or Oracle client 11.2.0.2
- SQL *Plus 10.2.0.1.0, or Oracle client 11.2.0.2
- Oracle JDBC/THIN Interfaces 10.2.0.1.0, or Oracle client 11.2.0.2
- Oracle Net 10.2.0.1.0, or Oracle client 11.2.0.2

After these Oracle components are installed, run the upgrade patch to Oracle 10g 10.2.0.4 (32-bit).

Server: Discovery

The requirements for Discovery Server are as follows:

Software and Hardware Requirements

We recommend using the latest Microsoft service packs and security patches. The following table lists the operating systems which are supported.

Supported Operating system	RAM	CPU
Windows [®] Server 2008 R2	32 GB Minimum	Intel Xeon Processor or
Standard x64	64+ GB Recommended	Equivalent
Or	SSD Drives Recommended	Quad 2.4GHz 64-bit or
Windows [®] Server 2008 R2		better
Enterprise x64		

Additional Requirements and Recommendations

- DVD-ROM required for media installation. You do not need this if you have downloaded the installation from <u>http://support.lmkr.com/</u>.
- DCOM/Firewall must be configured to allow remote access. For DCOM configuration recommendations, refer to the white papers on the LMKR Support Portal.

Server performance is subject to a large number of variables. It is impossible to give specific recommendations here, but these are some guiding principles to use. In general, multi-user performance of a GeoGraphix Project Server is best when the server is dedicated to GeoGraphix and not shared with other applications, especially database applications. In addition, consideration should be made for the number of GeoGraphix users and the size and number of concurrently accessed projects. At some point, having multiple project servers becomes a better solution than having all users on one server. Generally, somewhere between 10 and 20 users is when a second server might be suggested.

Networking

Networking performance depends on the number of users trying to access a server simultaneously, as well as the bandwidth requirements for those users. Recommendations for server bandwidth typically specify server connectivity at a higher bandwidth than an individual user. For instance, users running at 100 Mbit should be accessing a server running on a 1-Gbit backbone. If users are at 1 Gbit, consider running multiple 1-Gbit connections or a single higher-bandwidth connection on the server.

Database Cache

A large database cache is an important factor to consider when dealing with multiple users accessing large databases. The database engine is capable of addressing a practically unlimited amount of cache memory. The best way to size the memory is to estimate the memory requirements for other running applications and allow the database cache to dynamically allocate any remaining free memory. The engine will only allocate what it needs when using dynamic allocation up to the maximum specified.

It is highly recommended that you let the database engine use as much cache memory as it requires on the host server. Increasing database cache memory is the quickest and most effective way to improve database-related performance on large network projects.

On a workstation, it might be appropriate to reserve 1 to 2 GB for the OS and file system cache and 2 to 4 GB for other running applications. On a dedicated project server, not much memory needs to be reserved for other applications. The ideal maximum varies by the project size, the number of users, and other load considerations. But as a general rule, the higher you can set the maximum, the better.

Storage

A great deal of Discovery's access patterns on a server deal with file I/O. Database access, raster images, and seismic data are examples of files that benefit substantially from a fast disk sub-system. Server environments also place a high importance on data integrity and reliability. At a minimum, consider using a RAID 5 (striped with parity) array. As the size of disks increases, you may also want to consider a hot swap drive and/or RAID 6 (striped with dual parity). Using a controller card with its own cache can also help improve performance.

Network Attached Storage (NAS), Storage Area Networks (SAN), and Other Non-Windows Storage Solutions

There are two typical methods used for accessing external storage devices from a project server: iSCSI and CIFS.

- iSCSI allocates a block of storage on the external device and makes it appear to be a physical disk on the project server. This has the advantage of a 100% compliant file system. However, since the external device sees the allocation as one big file, it makes backup and restoration of individual files using the external device's capabilities more difficult. Standard backup and restore procedures from the server will still work.
- Using CIFS for external storage devices depends greatly on the vendor's implementation of the CIFS protocol used by the Windows platform. In general, a 100% compliant implementation of CIFS for a performant system is required. In particular, the vendor's implementation of the "File Change/Notify" functionality has been problematic. Devices based on the Windows Storage Server should be 100% compatible, since it shares its components with Windows. Implementations based on UNIX/Linux are where problems occur, due to the fact that the kernel level support is not present. Due to these uncertainties with CIFS implementations, LMKR does not technically support CIFS.

Prerequisites

Discovery 2016.1 has several prerequisites that are required to run the software, as well as prerequisites that are used to enhance the software. These prerequisites can be installed by downloading the appropriate "Discovery Third Party Installer" from the LMKR Support Portal.

Microsoft .NET Framework 3.5

This is specifically required if you are using smartSECTION on a Microsoft Windows[®] 10 operating system. The Microsoft .NET 3.5 can be downloaded from Microsoft's website and then installed. It is also available in the 3rd Party installers shipped with Discovery 2016.1.

Microsoft .NET Framework 4.5.1

Discovery 2016.1 must have Microsoft's .NET 4.5.1 installed. The Microsoft .NET 4.5.1 can be downloaded from Microsoft's website, and then installed. It is also available in the 3rd Party installers shipped with Discovery 2016.1.

ESRI ArcGIS Runtime Engine

New functionality within GeoAtlas related to geo-referenced images and CAD files requires the ESRI ArcGIS 10 Engine with ESRIArcGIS 10.2.x or ESRI ArcGIS 10.3.x. If the ArcGIS Engine is not installed, this message box will appear but the setup will continue:

Microsoft DirectX 11 End-User Runtimes

Discovery 3D requires Microsoft's DirectX 11 June 2010 End-User Runtimes to work properly. The Discovery 3D application works only on the Windows 7 (64-bit) or higher operating system. Discovery 3D is not installed unless the computer has Windows 7 (64-bit) or higher. Further Discovery 3D requires a DirectX 11 compatible display card. DirectX 11 June 2010 End-User Runtimes can be installed by downloading the Discovery Third Party Installer. If Discovery 3D is going to be installed, but the DirectX 11 June 2010 End-User Runtimes are not installed, a message box will appear but the setup will continue:

Installation

Discovery utilizes Microsoft Windows[®] Installer technology for installing the Discovery applications. Windows[®] Installer technology provides powerful features for installation and component configuration, network installations (distribution\deployment) and software removal\uninstallation.

Note: Have you read the System Requirements?

This installation guide provides step-by-step instructions for End User or Network Administrator installations:

- End User Installation
 - Install Discovery Applications to a Single Workstation.
- <u>Network Administrator Installation</u>
 - Create LMKR License Service Server for Multiple Workstations.
 - Install the Discovery Applications to Multiple Workstations.
 - Create a Discovery Project Server (optional).

End User Installation

This installation will add the Discovery applications to a Single Workstation.

Caution:	
General	The following conditions must be met before you can install the
Installation Requirements	 Discovery 2016.1 software: You must have Administrative Rights to the local computer that will run the install.
- please refer to the <u>System</u> <u>Requirements</u>	 Must have Internet Explorer 6.0 or higher installed. Microsoft .NET 4.5.1 must be installed. If you are using smartSECTION on a Windows[®] 10 operating
for a complete list	 system, .NET Framework 3.5 must be installed. Must have networking installed including the <i>TCP/IP</i> protocol. This software should only be installed on <i>Windows® 7</i>, <i>Windows® 10</i>, or <i>Windows® Server</i> 2008 operating systems.

There are 8 or 10 installation steps, depending upon whether you perform a typical or custom install:

- STEP 1 Getting Started with the Discovery 2015.1 Release
- STEP 2 InstallShield Wizard Startup
- STEP 3 <u>License Agreement</u>
- STEP 4 <u>Customer Information</u>
- STEP 5 <u>Setup Type (Typical vs. Custom)</u>
- Typical STEP 6 <u>Select Log Units of Measurement</u>
- Typical STEP 7 <u>Ready to Install the Program</u>
- Typical STEP 8 InstallShield Wizard Completed

- Custom STEP 6 <u>Custom Setup</u>
- Custom STEP 7 Local Projects Folder
- Custom STEP 8 Log Units of Measurement
- Custom STEP 9 <u>Ready to Install the Program</u>
- Custom STEP 10 InstallShield Wizard Completed

<u>Note</u>: LMKR licensing is installed before or after the above Discovery master installation steps. When Discovery applications are started through the Desktop shortcuts or Start Menu Programs, a licensing check is performed on the workstation. Please refer to the <u>LMKR Licensing</u> section for further details.

End User Installation STEP 1- Getting Started with LMKR Download or Release DVD

Before starting installation, make sure that all open applications are closed.

If you have downloaded Discovery 2016.1 from LMKR, go to the **Download** folder and double-click on the **Discovery2016.1Setup.exe** file to begin. You will proceed directly to <u>STEP 2 - InstallShield Wizard</u> <u>Setup</u>.

If you have ordered the **Discovery 2016.1 DVD**, continue through this step.

Insert the Discovery/Landmark Connectivity/Seismic Modeling DVD-ROM into the DVD-Drive.

The GeoGraphix splash screen appears for a few seconds.

<u>Note:</u> If the GeoGraphix splash screen does not appear automatically, go to the Start menu, and choose Run. In the Run dialog box, browse to the appropriate DVD-drive and select the Install.exe file. Click OK.

After the splash screen appears for a few seconds, the GeoGraphix install window appears.

Click the first option, Installation. to proceed to the next step in the End User

End User Installation STEP 2 - InstallShield Wizard Startup

After clicking **Install Discovery, Landmark Connectivity, and Modeling** in the previous step, the InstallShield wizard is started.

Discovery 2016.1 - InstallShield Wizard	
2	Preparing to Install
<u> </u>	Discovery 2016.1 Setup is preparing the InstallShield Wizard, which will guide you through the program setup process. Please wait.

When installation is finished, the InstallShield Wizard Completed dialog box appears.

岁 Discovery 2016.1 - InstallShield Wizard		
	InstallShield Wizard Completed	
	The InstallShield Wizard has successfully installed Discovery 2016. 1. Click Finish to exit the wizard.	
Geo Graphix [.]	< Back Finish Cancel	

Click Finish to exit the installation.

The Discovery software can now be started through Desktop shortcuts or **Start** >> **All Programs**.

Note: LMKR licensing is now installed before or after the Discovery master installation steps. When the Discovery applications are started through Desktop shortcuts or Start >>All Programs, a licensing check is performed on the workstation. Please refer to the <u>LMKR License Management Tool</u> section for further details.

Network Administrator Installation

There are several possible installation configurations and methods that could be used for deploying Discovery in a network environment. The best method for your particular situation depends upon the number of users and your network environment.

There are at least 3 important components to consider in any network environment:

- LMKR License Management Tool
- Workstation Installation
- Discovery Project Server (Optional)

If you have any questions or issues with your particular network environment, please do not hesitate contacting <u>GeoGraphix Technical Support</u>.

Network License Server

The LMKR License Management Tool must be installed to use Discovery in a network environment. Download the tool from the **LMKR Support Portal - Downloads** page and follow the installation instructions.

After the server is set up, when the **License Management Tool** runs on the client computer, choose the **I** want to setup or manage a network license server on this computer option and enter the required information.

For more information on the license wizard see the <u>LMKR Licensing</u> section.

Workstation Installation

Caution:		
General	 The following conditions must be met before you can install the Discovery 2016.1 software: 	
Installation Requirements	 You must have Administrative Rights to the local computer that will run the install. 	
- please refer to the <u>System</u>	 Must have <i>Internet Explorer 6.0</i> or higher installed. Microsoft .NET 4.5.1 must be installed. 	
Requirements for a complete list	 Must have networking installed including the <i>TCP/IP</i> protocol. This software should only be installed on, <i>Windows® 7 or 10</i>, or 	
	Windows [®] Server 2008 operating systems.	

Network Administrator Installation

The workstation installation in a network environment can be initiated from the Discovery 2016.1 download or directly from the Release DVD or by creating an Application Distribution site:

- Using LMKR download or Release DVD
- Using Application Distribution Site

Using LMKR Download or Release DVD

Workstation installations directly from the Discovery 2016.1 download or the Release DVD are quite acceptable if you do not mind configuring the installation at each workstation. The installation could be shared on a network drive or carried from workstation to workstation.

The installation procedure for workstation installations directly from LMKR or the release DVD is identical to the <u>End User Installation</u>.

<u>Note</u>: Licensing will need to be configured on each workstation. The configuration can be set with the <u>LMKR License Management Tool</u>.

Using the Application Distribution Site

Workstation Installations with an Application Distribution Site can save considerable configuration time at the workstation and can even be automated to create unattended, silent installations for the workstation.

There are 6 steps involved with performing Workstation Installations using an Application Distribution Site:

- STEP 1: <u>Administrative Install Start >> Run</u>
- STEP 2: <u>Administrative Install InstallShield Wizard Startup</u>
- STEP 3: Administrative Install Network Location
- STEP 4: Administrative Install InstallShield Wizard Completed
- STEP 5: Configure Application Distribution Site
- STEP 6: <u>Install to Workstations</u>

Create Application Distribution Site STEP 1 - Administrative Install - Start >> Run

An administrative installation is generally started with a Run "setup.exe" command containing the "/a" parameter.

A Run command can be configured in the standard Windows[®] Run dialog box. This dialog box can be accessed from the Windows Taskbar **Start** menu and **Start** >> **Run**.

If the Discovery 2016.1 DVD is in a DVD-Drive with assigned drive letter of "E", then the command line would be like the following in the Run dialog box:

📼 Run	×
	Type the name of a program, folder, document, or Internet resource, and Windows will open it for you.
Open:	E:\Setup\Setup.exe/a ▼
	OK Cancel Browse

Create Application Distribution Site STEP 2 - Administrative Install - InstallShield Wizard Startup

After configuring the Run command in STEP 1 - Administrative Install - Start >> Run, the InstallShield wizard is started...

Discovery 2016.1 - InstallShield Wizard	
	Preparing to Install
-	Discovery 2016.1 Setup is preparing the InstallShield Wizard, which will guide you through the program setup process. Please wait.
A	Extracting: Discovery 2016. 1.msi
Cancel	

The Welcome to the InstallShield Wizard for Discovery 2016.1 appears on your screen.

Click Next to proceed to the Network Location step of the wizard.

Note: Clicking the **Help** button will open the Discovery Installation Guide help window (this documentation).

Create Application Distribution Site STEP 3 - Administrative Install - Network Location

This step of the wizard determines the location where the distribution site will be created on the network.

In this particular example, a network server share of "apps" is mapped to the "C" drive. The Application Distribution Site will be created in a folder and subfolder called GeoGraphix\Distrib\.

	Geo Graphix
Network Location	
Specify a network location for the	server image of the
Enter the network location or click server image of Discovery 2016.1 the wizard.	Change to browse to a location. Click Install to create a at the specified network location or click Cancel to exit
Network location:	
Network location: C:\apps\GeoGraphix\Distrib\	<u>C</u> hange
<u>N</u> etwork location: C:\apps\GeoGraphix\Distrib\	<u>C</u> hange

Option	Description
Network location:	Specify the network mapped drive/path or UNC path where the distribution site will be created.
	Note: A User running an administrative installation must have permissions to write to the designated Network location.
	Discovery Release Setup contents will be copied and decompressed to this network location.
Change command button:	Clicking this command button will open the Change Current Destination Folder dialog box where you can change the network location destination folder.

🖞 Discovery 2016.1 - InstallShield Wizard
GeoGraphix
Change Current Destination Folder
Browse to the destination folder.
Look in: GeoGraphix Comparison Comparison Comparison Comparison Comparison Comparison Comparison Comparison Comparison Comparison Comparison Com
Eolder name: C:\Program Files (x86) \GeoGraphix\ InstallShield
Click the Down Arrow in the Look in list box to navigate to a new destination folder. <u>Note</u> : The New Folder command button and be used to create new folders.
When a new destination is set, click OK to return to the Network Location dialog box.

Click **Install** to copy files and create network distribution site.

Create Application Distribution Site STEP 4 - Administrative Install - InstallShield Wizard Completed

After **Install** is clicked in the Network Location step, installation files are decompressed and copied to the network location that was designated in STEP 3 - Administrative Install - Network Location.

And when the installation is finished, the InstallShield Wizard Completed dialog box appears:

H Discovery 2016.1 - InstallShield Wizard		
LM KR	InstallShield Wizard Completed	
	The InstallShield Wizard has successfully installed Discovery 2016.1. Click Finish to exit the wizard.	
0		
Geo Graphix		
	< Back Finish Cancel	

The Network Application Distribution Site should contain the following folders and files at this point:

Name	Date modified	Туре
👢 Setup	9/20/2016 6:12 PM	File folder
👢 Utilities	9/20/2016 6:12 PM	File folder
AUTORUN	10/23/2008 2:24 AM	Setup Information
🛃 closing	9/23/1997 2:06 AM	Bitmap image
Demo.dbd	9/20/2016 3:25 PM	DBD File
Demo.dsj	9/20/2016 3:25 PM	DSJ File
DS32.DLL	11/14/2000 3:39 AM	Application extens
🛂 Install	11/14/2000 3:39 AM	Application
🔒 Setup_Instructions	7/24/2015 9:01 PM	Compiled HTML H
Thumbs	9/6/2016 1:35 PM	Data Base File

In the next step, the setup.ini of the application distribution site will be configured for distribution to the workstations.

<u>Note</u>: Running the setup.exe in the application distribution site could be used at a workstation to install Discovery software, but configuring the setup.ini can save time and even be automated to create an unattended, silent installation for the workstations.

Create Application Distribution Site STEP 5 - Configure Application Distribution Site

After all the necessary files have been copied and decompressed to the Application Distribution Site with the Administrative Install in the previous steps, the Application Distribution site needs to be configured for your particular network environment.

<u>Note</u>: If you only have the download of the setup and not the DVD media, you will need to use the Workstation Setup files located on the Discovery Utilities under Extras\Workstation files.

This involves editing some of the existing command variables (such as, User Name, Company Name, etc.) or adding commands along with variables to the "**Setup.ini**" file on the Application Distribution Site.

Look for the [Startup] section in the "Setup.ini":

The following table lists some commands and variables that may be used on the CmdLine in the "Setup.ini":

Command	Variable (quotes required where shown)	Description
USERNAME	"Text string"	The variable value within quotes will be used for the User Name field in the <u>Customer Information</u> dialog.
COMPANYNAME	"Text string"	The variable value within quotes will be used for the Organization field in <u>Customer Information</u> dialog.
ADDLOCAL	"Apps,ClientDrivers60,Data Direct60,Discovery,GeoGra	This variable value would install all the necessary features for Discovery only.

(This command	phixDiscovery,LeadTools,M	
can be used to	odules,	Note: If the ADDLOCAL command is used, then
install specific	ProjectServer,Providers,Ser	the ALLUSERS command must also be used.
Discovery	vices,SystemCore,Windows	
applications. It is	SystemFiles,AOLibCopier,D	
very similar to	ataCore,	
choosing specific	DepthRegistration2, Discov	
features in a	ery3D,EventLogging,GES,He	
<u>custom</u> install. If	lpCore,LandmarkConnectivi	
this command is	ty,	
not used, then a	MapObjects.Common,Map	
typical install is	Objects.Release,Modeling,	
run.)	Prizm, Project Database Reb	
	uilder,	
	Projects, Seis Vision, smart SE	
	CTION,SQLAnywhere17,Thi	
	rdParty.Common,ThirdPart	
	y.Release,	
	Tools, Tours And Tutorials, Tr	
	acPlannerUtilities,WellXcha	
	nge,WindowsSystemCore,	
	WPFToolkit"	
	Note: This command is on	
	one line with no spaces.	
ALLUSERS	1	If the ADDLOCAL command is used, then the
		ALLUSERS command must also be used.
		The ALLUSERS command enables the installation
		of GeoGraphix services.
PROJECTS	"Local Drive:\Folder"	This must be a local hard drive. This command can
		be used to designate a local projects folder which
		is essentially step 7 of the custom end user
		installation.
		Note: If this command is not used, a Projects
		folder will be installed by default to C:\Documents
		and Settings\All Users\Application
		Data\GeoGraphix\Projects. If a previous local
		projects folder is detected by the install, then the
		local projects folder will be installed to the
		previous detected path\folder.
UNITS	"English"	This command can be used to make selections
	OR	normally made in step 8 of custom end user
	"Metric"	installation.
	OR	
	"CnMetric"	
/q, /qn	Not applicable	No UI seen during installation.

/qb	Not applicable	Basic UI seen during installation. qb! can be used to hide the Cancel button.
/qr	Not applicable	Reduced UI seen during installation. No modal dialog box displayed at the end of the installation.
/qf	Not applicable	Full UI seen during installation.
/qn+	Not applicable	No UI seen during installation except for a modal dialog box displayed at the end of the installation.
/qb+	Not applicable	Basic UI with a modal dialog box seen at the end of the installation. qb+! or qb!+ can be used to hide the Cancel button.
/qb	Not applicable	Basic UI with no modal dialog boxes seen during installation.

After removing the comment sign (";") and editing or adding variables in CmdLine, your "**Setup.ini**" CmdLine may look similar to the following example (other commands can exist):

Setup - Notepad		
<u>File Edit Format View H</u> elp		
[Info] Name=INTL Version=1.00.000 DiskSpace=8000 ;DiskSpace requirement in KB	:	
<pre>[Startup] CmdLine= "Russel Roundtree" COMPANYNAME= "Small Potatoes, Inc," SuppressWrongOS=Y ScriptDriven=2 ScriptVer=19.0.0.160 DotNetOptionalInstallIfSilent=N OnUpgrade=1 Product=Discovery 2016.1 PackageName=Discovery 2016.1.msi Enablet angD1g=N LogResults=N DoMaintenance=N ProductCode={0160FF3A-578A-42BD-A9A3-F57ABA004687} [Language5] RequireExactLangMatch=0x0404,0x0804 RTLLangs=0x0401,0x040d Default=0x0409</pre>		
		-

Note: Only a small portion of the "Setup.ini" is displayed above.

Using Application Distribution Site - STEP 6 - Install to Workstations (FINAL STEP)

After the application distribution site is configured for your network environment, Discovery applications can now be deployed to the workstations.

You can deploy Discovery applications to the workstations by sharing the application distribution site with the workstations and running "setup.exe" in the application distribution site (similar to the End User Installation).

You may want to utilize scripts or 3rd party tools such as Microsoft [®] SMS or InstallShield [®] AdminStudio that take advantage of Microsoft[®] Windows Installer technology for workstation deployment.

This is the last step in a Workstation Installation using an Application Distribution Site.

Discovery Project Server (Optional)

Creating a *Discovery* Project Server is an optional third component in a network administrator installation. It is a very important consideration if you want to store Discovery projects on a central server, then share those projects across the network for multiple users.

Note: A Workstation Installation will create a local projects folder on every workstation with GeoGraphix *Discovery* installed, so all workstations can create and store projects on their local hard drive. Local projects can also be shared between users on the network if the project properties in ProjectExplorer are set to network access. Please refer to the ProjectExplorer Help files for more information on local projects versus network projects.

A *Discovery* Project Server can be created with a custom installation using the Discovery 2016.1 download or Release DVD.

<u>Note</u>: This installation must be performed on the server that will become the *Discovery* Project Server. This server must have access to the <u>LMKR License Management Tool</u> (this server may also be the License Server).

There are 10 steps involved with creating a *Discovery* Project Server:

- STEP 1 Getting Started with The Discovery download or Release DVD
- STEP 2 InstallShield Wizard Startup
- STEP 3 <u>License Agreement</u>
- STEP 4 <u>Customer Information</u>
- STEP 5 <u>Setup Type (Typical vs. Custom)</u>
- STEP 6 <u>Custom Setup</u>
- STEP 7 Local Projects Folder
- STEP 8 <u>Log Units of Measurement</u>
- STEP 9 <u>Ready to Install the Program</u>
- STEP 10 InstallShield Wizard Completed

Discovery Project Server - STEP 1 - Getting Started with the Discovery Download or Release DVD Before starting the installation, make sure that all open applications are closed.

If you have downloaded Discovery 2016.1, go to the **download** folder and double-click on the **Discovery2015.1Setup.exe** file to begin. You will proceed directly to <u>STEP 2 - InstallShield Wizard Setup</u>.

If you have ordered the **Discovery 2016.1 DVD**, continue through this step.

Insert the Discovery/Landmark Connectivity/Seismic Modeling DVD-ROM into the DVD-Drive.

The GeoGraphix splash screen appears for a few seconds.

Note: If the GeoGraphix splash screen does not appear automatically, go to the Start menu, and choose **Run**. In the Run dialog box, browse to the appropriate DVD-ROM drive and select the **Install.exe** file. Click **OK**.

After the Splash Screen appears for a few seconds, the GeoGraphix install window appears.

to proceed to the next step in the

Discovery Project Server Installation.

Discovery Project Server - STEP 2 - InstallShield Wizard Startup

After clicking **Install Discovery, Landmark Connectivity, and Modeling** in the previous step, the InstallShield wizard is started...

Discovery 2016.1 - InstallShield Wizard		
Z	Preparing to Install	
	Discovery 2016.1 Setup is preparing the InstallShield Wizard, which will guide you through the program setup process. Please wait.

Discovery can now be started through the desktop shortcuts or the Start menu.

<u>Note</u>: The Discovery Project Server must now be configured to connect to the LMKR Licensing Management Tool. When the Discovery application is started through desktop shortcuts or the Start menu, a licensing check is performed on computer. Please refer to <u>LMKR Licensing Management Tool</u> for further details.

This is the final step in creating a Discovery Project Server. If necessary, other components in a Network Administrator Installation (such as Workstation Installations) may now be installed.

LMKR Licensing

LMKR License Management Tool

If no license file is configured for Discovery the following message appears:

All of the licensing of Discovery products is configured using this tool. Use this tool to set a license for a single computer or to set up a network license on a server.

Once the LMKR License Management Tool is accessed, launch it by selecting **Start** >> **All Programs** >> **LMKR** >> **Licensing** >> **License Management Tool**.

LMKR License Management Tool	
Welcome	
I want to configure client licensing for this computer I want to setup or manage a network license server on this computer	
	About Close

You can access a <u>client license</u> for a computer by clicking the I want to configure client licensing for this computer command on the Welcome Page.

You can set up a <u>network license</u> by clicking the I want to setup or manage a network license server on this computer command on the Welcome Page.

Client License

Setup a client License by clicking the I want to configure client licensing for this computer option on the <u>Welcome page</u> of the LMKR License Management Tool.

				Move Up
				Move Down
	Upload File Add Server	Remove	/iew	
R			Back	Next
₩	Upload File	Remove	/icw Back	Move Down

Use this page to select a client license for installation from your local computer or from a server. Use the buttons at the bottom and the right-hand side of the window to add servers to the list, remove servers from the list, or move the servers up or down the list. The LMKR License Management Tool will look for license files on each server in order, from top to bottom.

Click the **Upload File** button to begin the search for a license file locally.

Click the Add Server button to point to a client license on a server.

If you want to select a license file from a specific server, highlight that server in the list and click the **Upload File** button.

Click the **Next** button to view the validation of the license.

When license has been configured properly, the **License Validation** page will confirm that the license **Passed**. If the license is not valid or if the network connection is not functioning properly, the validation page will list the license as **Failed** (as shown below).

Landmark Connectivity Installation

Installing Landmark Connectivity will install the following Discovery applications/features:

- WellXchange
- GridXchange
- SeisXchange

Landmark Connectivity will be installed by default with the Discovery <u>Typical</u> setup type installation or can be custom installed by selecting the Landmark Connectivity feature in the Discovery <u>Custom</u> setup type of the installation.

Caution:

To run SeisXchange, and GridXchange, <u>Landmark OpenWorks for Windows</u> **5000.10.1.05 and** its associated software components must also be installed.

In addition, if you are utilizing SeisXchange, an NFS application such as Hummingbird[®] NFS Maestro must also be installed and the configuration of several components to access SeisWorks will be necessary. (This does not apply to WellXchange-OpenWorks Connect or GridXchange.) Please refer to <u>Preparing the SeisXchange Environment</u> for further information if you will be utilizing SeisXchange and SeisVision on OpenWorks.

Go to: OpenWorks for Windows

Go to: Preparing the SeisXchange Environment

Return to: Installation

OpenWorks for Windows

<u>Note</u>: Discovery on OpenWorks projects, GridXchange, and SeisXchange require OpenWorks for Windows.

Please refer to the OpenWorks Installation Procedures for detailed, step-by-step instructions for installing OpenWorks for Windows. This document discusses installing all the software components associated with OpenWorks for Windows:

<u>Note</u>: The OpenWorks full install requires Hummingbird Exceed. The Oracle client installation in use with OpenWorks Full requires that the "Administrator" option be selected. The "Administrator" option type includes the SQL Plus, the Oracle Database Utilities, and other components necessary to run Discovery on OpenWorks

Note: Hummingbird exceed is not required for the OpenWorks Basic install. If OpenWorks Basic installation is used, the Oracle client installation can use the "Administrator" option, which will include all of the needed components. Or, the Oracle client installation for the OpenWorks Basic installation can use the "Custom" installation type. However, with the Custom install type the following components must be installed:

- Oracle Database Utilities 10.2.0.1.0, or Oracle client 11.2.0.2
- SQL *Plus 10.2.0.1.0, or Oracle client 11.2.0.2
- Oracle JDBC/THIN Interfaces 10.2.0.1.0, or Oracle client 11.2.0.2
- Oracle Net 10.2.0.1.0, or Oracle client 11.2.0.2

After these Oracle components are installed, run the upgrade patch to Oracle 10g 10.2.0.4 (32-bit).

Preparing the SeisXchange Environment

Once <u>OpenWorks for Windows</u> along with <u>Discovery</u> are in place, the installation and configuration of an NFS application, along with configuration of the dir.dat file to access SeisWorks, will be necessary if SeisXchange or SeisVision on OpenWorks will be utilized:

- 1. Install and configure the NFS application as necessary.
- 2. Export the required UNIX [®] /LINUX [®] SeisWorks file systems for NFS.
- 3. Verify that all the required NFS daemons are running on the UNIX [®] /LINUX [®] computer.
- 4. Configure the Windows[®] environment variable OW_CONF_DIR (which defaults to \$OWHOME/conf where the district.dat file is located), which will point to the location of the dir.dat file associated with the district.
- 5. Configure the dir.dat (example shown below) to find exported SeisWorks file systems.

Utilities

You can install the Discovery 2016.1 Utilities from the download section of the Discovery 2016.1 Software from the LMKR Support Portal - Downloads page or from the Discovery 2016.1 Release DVD.

If you have downloaded Discovery 2016.1 from LMKR, see the **GeoGraphix Discovery 2016.1 Utilities Read Me** to install the Utilities. Click on the **Install Guide** button to open the **GeoGraphix Discovery 2016.1 Utilities Read Me** file.

If you have downloaded Discovery 2016.1 from the LMKR website, go to the **download folder** (for XP 64bit Operating Systems), or the folder you specified to save the Utilities folder during the download, and double-click on the specific Utility executable file to begin.

If you have ordered the **Discovery 2016.1 DVD**, continue through this step.

Insert the **Discovery/Landmark Connectivity/Seismic Modeling DVD-ROM** into the DVD-Drive. If you have ordered the Discovery 2016.1 DVD insert the Discovery/Landmark Connectivity/Seismic Modeling DVD-ROM into the DVD-Drive.

The GeoGraphix splash screen appears for a few seconds.

<u>Note</u>: If the GeoGraphix splash screen does not appear automatically, go to the Start menu, and choose **Run**. In the Run dialog box, browse to the appropriate DVD-ROM drive and select the **Install.exe** file. Click **OK**.

After the Splash Screen appears for a few seconds, the Install Options window appears.

There are two utilities available on the Utilities screen:

- Install PRIZM Chart Utility
- Install SeisVision SEG-Y Trace Viewer

Utilities - Install PRIZM Chart Utility

If you have downloaded the Discovery 2016.1 Utilities and used the default settings, the PRIZM Chart Utility folder will be in the C:\Program Files (x86)\GeoGraphix\Utilities folder (for a typical download on a Windows[®] (64-bit) operating systems). If you have not used the default settings during the download, navigate to the folder specified for saving the Utilities. Clicking Setup.exe in the Prizm Chart Utility folder will open the Prizm Chart Utility dialog box.

If you have the Discovery 2016.1 DVD, insert the DVD into the DVD drive and select the Install PRIZM

Chart Utility option Install PRIZM Chart Utility on the Utilities screen of the Discovery install screen or the release DVD to launch the PRIZM Chart Utility Setup program.

1	Prizm Chart Utility v3.1 Setup		
	Welcome to the Prizm Chart Utility v3.1 installation program.		
	Setup cannot install system files or update shared files if they are in use. Before proceeding, we recommend that you close any applications you may be running.		
	OK Exit Setup		

Utilities - Install SeisVision SEG-Y Trace Viewer

If you have downloaded the Discovery 2016.1 Utilities and used the default settings, the SeisVision SEG-Y Tracer View Utility folder will be in the **C:\Program Files (x86)\GeoGraphix\Utilities** folder (for a typical download on a **Windows**[®] (64-bit) operating systems). If you have not used the default settings during the download, navigate to the folder specified for saving the Utilities. Clicking **Setup.exe** in the utility folder will open the Welcome dialog box.

If you have the Discovery 2016.1 DVD, insert the DVD into the DVD drive and select the Install SeisVision

SEG-Y Trace Viewer option Install SeisVision SEG-Y Trace Viewer on the Utilities screen of the

Discovery install screen or the release DVD to launch the SeisVision SEG-Y Trace Viewer Setup program.

Uninstalling Discovery 2016.1

Similar to uninstalling other Windows[®] applications, Discovery 2016.1 can be removed from a computer using **Add/Remove Programs** in the Control Panel.

There are 3 simple steps to removing Discovery 2016.1:

Note: All Discovery applications should be closed or exited before completing the following steps.

- STEP 1 <u>Stopping GeoGraphix Services in Control Panel Services</u>
- STEP 2 Getting Started with Add/Remove Programs in Control Panel
- STEP 3 <u>Removing Discovery Software</u>

STEP 1 - Stopping GeoGraphix Services in Control Panel Services

From the Windows[®] Taskbar, use **Start** >> **Control Panel** >> **Administrative Tools** >> **Services** to open the Services applet window.

There are three GeoGraphix Services that should be stopped before removing GeoGraphix software:

- GGX Database Service
- GGX List Service (v2)
- GGX Network Access Service

A Services						x

GGX Network Access Service	Chand	ec
🎑 Google Update Service (gupda	Start	
Google Update Service (gupda	Stop	
Group Policy Client	Pause 6	ed

Note: It is recommended that the above GeoGraphix Services are stopped before removing Discovery software, but if the Services are not stopped, the Discovery Uninstall program will stop the Services during the uninstall/removal process.

STEP 2 - Getting Started with Programs and Features in Control Panel

To start the uninstall/removal of the Discovery software, open the Programs and Features applet using **Start** >> **Control Panel** >> **Programs and Features**.

Note: If the Control Panel is set to View by: Category (rather than View by: Large icons or View by: Small icons), select Programs >> Uninstall a program.

In the Programs and Features window, **highlight** Discovery 2016.1. Right-click and select **Uninstall** to remove Discovery or select the Change or Repair buttons to modify or repair a Discovery install.

Note: The **Change** button (or right-click option) can be used to modify or repair Discovery installations. **Repair** will re-install the Discovery software repairing any files or registry entries that may be missing or damaged.

Click the **Remove** button to proceed to the next step of removing/uninstalling the Discovery software.

STEP 3 - Removing Discovery Software (FINAL STEP)

After highlighting Discovery 2016.1 and clicking the **Uninstall** command in the Programs and Features window, a progress bar will appear and Discovery will be removed from the computer.

iscovery 2016.	.1			
Please v	wait while Windov	vs configures Disc	covery 2016.1	
Time remaining:	: 1 minutes			
	-			Cancel

<u>Note</u>: Some data and project file directories may be left on the hard drive. These directories are typically the following (may be different if software was installed without default directory locations):

- C:\Documents and Settings\All Users\Application Data\GeoGraphix
- C:\Program Files\GeoGraphix

This is the last step in uninstalling/removing the Discovery software from your computer.

Contacting LMKR Support

LMKR is committed to providing the highest level of technical customer support in the industry. With an average tenure of more than thirteen years, our highly trained and experienced staff of technical analysts is comprised of geoscientists, engineers, land professionals, petrophysicists, and system specialists.

Please refer to our Customer Support timings mentioned below to ensure that you have access to our support analysts assigned to your region. When getting in touch with LMKR support, please remember that real-time support will not be available during bank holidays or after office hours. If you do get in touch with LMKR Support outside of work hours, please leave a voice message with a brief description of the issue that you are facing. Your voice message will be used to automatically create a support case for you. This will enable our analysts to attend to your issue and provide you with a resolution as soon as possible
